Munich, January 2025. *Glass partition wall solutions create new possibilities for space utilisation. With SANCO DIVIDE EASY, there's no need to compromise on aesthetics, safety, sound insulation, or sustainability. This versatile partition wall system, made from high-quality safety glass, enables flexible room design in both residential and workspaces.*

Modular design for agility

Thanks to its modular elements, SANCO DIVIDE EASY can be installed quickly and easily, making it suitable for both temporary and permanent room solutions, while adapting to individual interior design concepts. The minimalist design, featuring slim profiles, integrates seamlessly into a variety of architectural styles, creating timeless elegance. With its transparent aesthetics,

SANCO®

the partition system supports open and bright room concepts that encourage collaboration and creativity. At the same time, it provides acoustic privacy where needed, with sound insulation adjustable up to a rated sound reduction of Rw 41 decibels.

Combined with accessories such as handrails, frames, or doors, the system offers numerous design possibilities. In addition, the glass panels can be supplied with matt finishes or decorative films to further enhance creative freedom.

Compliant with standards

Constructed from robust tempered safety glass or laminated safety glass, SANCO DIVIDE EASY ensures maximum stability and safety. It features a prefabricated glass partition wall system with an integrated door frame that can be installed quickly without drilling or gluing. The concealed cable management and compatibility with DIN-standard lock fittings make it ideal for integration into smart building management systems. The patented frame system compensates for construction tolerances and accommodates door leaf heights of up to 3,100 mm. Certified by the ift Rosenheim Institute for Window Technology, the system achieves top ratings in load tests and offers exceptional durability.

Sustainable and recyclable

SANCO DIVIDE EASY also stands out for its sustainability. The materials used are recyclable, and manufacturing processes are resource-efficient – a valuable contribution to sustainable architecture. Particularly practical: the partition system is both easy to maintain and simple to clean.
